Approved uses for CRESTOR
When diet and exercise alone aren't enough, CRESTOR is prescribed along with diet to adults to lower high cholesterol and to slow plaque buildup in arteries as part of a treatment plan to lower cholesterol to goal.

Important Safety Information about prescription CRESTOR Tablets
CRESTOR is not right for everyone. Do not take CRESTOR if you are nursing, pregnant or may become pregnant, have liver problems, or have had an allergic reaction to CRESTOR. Your doctor should do blood tests to check your liver before starting treatment and if you have symptoms of liver problems while taking CRESTOR. Call your doctor right away if you have unexplained muscle pain or weakness, especially with fever, have muscle problems that do not go away even after your doctor tells you to stop taking CRESTOR, feel unusually tired, or have loss of appetite, upset belly pain, dark urine, or yellowing of skin or eyes. These could be signs of rare but serious side effects. Elevated blood sugar levels have been reported with statins, including CRESTOR. The most common side effects may include headache, muscle aches, abdominal pain, weakness, and nausea. Memory loss and confusion have also been reported with statins, including CRESTOR. Tell your doctor and pharmacist about other medicines you are taking. Talk to your doctor about CRESTOR.

If you can't afford your medication, AstraZeneca may be able to help. For more information, please visit www.AstraZeneca.com. You are encouraged to report negative side effects of your drug to the FDA. Visit www.FDA.gov/medwatch, or call 1-800-FDA-1088.
